**DESCRIPTION:**

The PR-21 is a versatile instrument for troubleshooting and analyzing logic circuits. Features include visual indication of pulse level and pulse presence, pulse memory, plus an audible, two-tone, logic state indicator. The probe responds to pulses as narrow as 30ns and pulse trains up to 20MHz, and is compatible with TTL, DTL, RTL, HTL, CMOS and MOS. It is also compact and lightweight. Three color-coded LEDs indicate pulse presence and high/low logic states. Visual indication is complemented by audible tones of two distinctly different frequencies to distinguish the logic states easily. The PR-21 Logic Probe is a valuable servicing aid, especially when used in conjunction with the PR-31 Logic Pulsar.

**PR-31 Logic Probe/Pulse Generator**

- **Trouble Shooting/Design Tool**
- **Pulse Generator**
  - Use with Companion Logic Probe PR-21 or Scope
  - Compatible with Most Logic Families
  - Signal Injector (Square Wave)
  - Switchable 0.5/400Hz Pulse Rate
  - Sources/Sinks 100mA Pulses
  - External Sync Input
  - Circuit Powered
  - 90-Day Limited Warranty

**DESCRIPTION:**

The PR-31 Pulse Generator is used to inject a signal into a logic circuit without having to remove the IC or open the circuit. Using the companion PR-21 Logic Probe you can detect component failures or wiring errors. The average power of the injected signal is limited by supply voltage (Vcc) of the circuit under test, and with its short duration pulses, will not damage circuit components.

The PR-31 Logic Pulsar produces a 10µs signal at a 100 mA load and can be switched to either 0.5Hz or 400Hz. It is also capable of generating a square wave equal to approximately 90% of the supply voltage (Vcc) at the square wave output terminal so that an oscilloscope can be used to observe and trace signals. The PR-31 Logic Pulsar also has an external sync input, which enables the user to synchronize the pulse output with an external signal, such as a computer clock circuit.
