

NTE1869 & NTE1869SM Integrated Circuit 3 Terminal Variable Voltage Regulator

Description:

The NTE1869 and NTE1869SM are semiconductor integrated circuits designed for general-purpose output voltage regulation. A high-performance variable output voltage regulator with small input-output voltage differences can be made in combination with externally connected PNP transistors. These devices include a reference voltage circuit, error amplifier, and driver, and the output voltage can be set freely by externally connected resistors, and a small, compact power supply circuit can be achieved making the device suitable for use in small electronic equipment, such as car stereo, radio cassette recorder and portable stereo equipment.

Features:

- Wide Operating Voltage Range: $V_{IN} = 3.5V$ to $36V$, $V_O = 1.5V$ to $33V$
- Output Voltage can be Freely Set by Externally Connected Resistors
- Built-In ASO Protection and Thermal Cutoff Circuits
- Available in 2 Package Styles:
 - NTE1869 (Giant TO92 Type)
 - NTE1869SM (SOT-89 Surface Mount)
