Instructions
1. Before using, please consult the user guide or study the rating label of your device to determine the correct voltage and current. If 1A is required, use the 57–U1 and select the correct voltage (3, 5, 6, 7.5, 9, 12 or 15VDC). If 2.5A is needed, use the 57–U2 and select the correct voltage (3, 5, 6, 7.5, 9 or 12VDC).
2. Set the adapter’s switch to the desired voltage BEFORE you connect it to your device.
3. If the adapter is not compatible with the voltage and current requirements of your device, it can cause permanent damage to your device or the adapter. Also, look for an image like the ones below on your device’s rating label or DC input jack to determine the correct polarity needed.
