NTE7209
Integrated Circuit
Vertical Output w/Bus Control Support
for TV and CRT Displays

Description:
The NTE7209 is a vertical deflection output integrated circuit in a 7-Lead Staggered SIP type package designed for high image quality TV and CRT displays that supports the use of a bus control system signal processing IC. The sawtooth waveform from the bus control system signal processing IC can directly drive the deflection yoke (including the DC component). Color TV vertical deflection system adjustment functions can be controlled over a bus system by connecting the NTE7209 to various bus control system signal processing ICs.

Features:
- Built-In Pump-Up Circuit for Low Power Dissipation
- Vertical Output Circuit
- Thermal Protection Circuit

Absolute Maximum Ratings: (TA = +25°C unless otherwise specified)
- Pump–Up Block Supply Voltage, +B2max .......................... 45V
- Output Block Supply Voltage, +B6max .......................... 92V
- Allowable Power Dissipation (Mounted on an arbitrarily large heat sink), Pdmax ......................... 9W
- Deflection Output Current, I5max ........................................ -1.5 to +1.5A
- Operating Temperature Range, Topr ................................ -20°C to +85°C
- Storage Temperature Range, Tstg ..................................... -40°C to +150°C
- Thermal Resistance, Junction-to-Case, RthJC ..................... 3°C/W

Recommended Operating Conditions: (TA = 25°C, unless otherwise specified)
